

# Cannot Reestablish Ethernet Link to SightSensor Connected to a Laptop

Last Modified on 09/03/2015 11:41 am EDT

## Overview:

3rd Generation SightLogix devices do not presently support auto network line reversal negotiation.

## Solution

If a SightLogix device is running and the network cable is disconnected and re-connected directly to a laptop, it will be necessary to do one of the following to reestablish Ethernet link connectivity:

- Cycle power to the Third Generation device and allow it to reinitialize
- Reboot the computer
- Use a crossover cable
